CONSTRUCTION INC
ADA CONSTRUCTION SPECIALISTS

New ADA compliant handrails

New concrete accessible path of travel to primary entrance

Remove Non compliant asphalt HC parking. Construct new ADA compliant concrete van stall and access aisle

The existing asphalt van stall slopes were non compliant, and new interior construction under a separate contract initiated the requirement to provide an accessible path to the front entrance.

Protrk's design-build solution provided the ADA van parking and access to the front door with minimal impact to the existing parking and overall aesthetic while also avoiding the removal of old growth trees.

Protrk upgraded non-compliant hand rails in place with zero demolition. We simplified the construction by attaching the new handrails to the existing, providing an ADA compliant solution for significantly less cost to the client.
